REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance. The prior art made of record in the attached form PTO-892 considered to be pertinent to the submitted application.

Schewesig US# 6,495,986 discloses a safe speed monitoring for sensorless three-phase drive. Wherein a setpoint stator frequency value is limited and monitored in a two-channel mode in two systems with approximate redundancy deriving for each system a respective control signals for the electrical valves of the inverter, which can be compared with one another in two systems of monitoring electronics.

Schewesig US# 6,573,681 discloses drive control for a three-phase ac motor via an inverter using safe technology. Wherein the combining of two technically contrasting functions of "safe stopping" and "braking by armature short-circuiting" is served by using two means for pulse inhibition to block the respective current valves in the event of a fault by interruption respective supply voltage for driving the control valves of the upper bridge arm and of the lower bridge arm.

However, none of the prior art teaches or suggest in combination:

- A unit that is arranged in the pulse-inhibiting path for briefly maintaining a supply voltage of the control circuit if a pulse-inhibition path electrically disconnects at least one of the control circuits from the external voltage.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
